Art Unit: 2674

DETAILED ACTION

1. This Office action is responsive to amendment filed on 01/09/2004.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-4, 6, and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Jeong et al. (U.S. Patent No. 6,271,816).

Regarding claim 1, referring to Figs. 1A, 2C, and 2G, Jeong teaches a liquid crystal display, comprising: a liquid crystal panel including a plurality of gate lines (R0, R1), a plurality of insulated data lines (C0, C1) crossing the gate lines (R0, R1), and a plurality of first thin film transistors (106) each having a gate electrode connected to a gate line (R0) and a source electrode connected to a data line (C0); a gate driver (102) for sequentially supplying a gate-on voltage to the gate lines (R0, R1) for turning on the thin film transistors (106); a data driver (104) for applying a data voltage to the data lines (C0, C1); a data line sharing switch having a plurality of switching devices (112), each of which formed between the adjacent data lines (C0, C1) to connect and disconnect the adjacent data lines (C0, C1); and a sharing signal generator for outputting a sharing control signal (i.e., neutralizer enable) for turning on the switching devices (112), wherein the data line sharing switch (272) (Fig. 2G) is place at one end of the liquid

Art Unit: 2674

crystal panel opposite to the data driver (104) (Fig. 2G) (col. 1. lines 10-67, col. 5, lines 1-67, and col. 6, lines 1-31).

Regarding claim 2, Jeong further teaches the data line sharing switch is formed on the liquid crystal panel (col. 1, lines 16-67 and col. 6, lines 24-31).

Regarding claim 3, Jeong also teaches that the switching devices (112) are second thin film transistors (col. 5, lines 35-36).

Regarding claim 4, Jeong teaches the second thin film transistors (112) are manufactured by the same process as the first thin film transistor (106) (Fig. 1A, col. 5, lines 1-67, col. 6, lines 1-31).

Regarding claim 6, Jeong further teaches the sharing signal generator applies a sharing signal pulse (i.e., neutralizer enable) for sharing the data lines (C0, C1) between the gate-on voltages applied to adjacent gate lines respectively (col. 5, lines 1-67, col. 6, lines 1-31).

Regarding claim 7, Jeong teaches the sharing signal generator applies a sharing signal pulse for sharing the data lines (C0, C1) after the voltage applied to the previous gate line turns to a gate-off voltage (col. 5, lines 1-67, col. 6, lines 1-31).

4. Claim 8 is allowed.

Response to Arguments

5. Applicants' arguments filed 01/09/2004, have been fully considered but they are not persuasive because as follows:

In response to applicants' argument filed "Jeong fails to teach or suggest the data line sharing switch is place at one end of the liquid crystal panel opposite to the data driver and the adjacent data lines are connected after the voltage applied to a previous gate line is changed to a

Art Unit: 2674

gate-off voltage, and the adjacent data lines are disconnected in a predetermined time after the gate-on voltage is applied to the gate line". However, Jeong teaches the data line sharing switch (272) is place at one end of the liquid crystal panel opposite to the data driver (104, 105) (Fig. 2G). Therefore, it is believed that the claim limitations are still met by Jeong the rejection is still maintained.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Jennifer T. Nguyen** whose telephone number is **703-305-3225**. The examiner can normally be reached on Mon-Fri from 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard A Hierpe can be reach at 703-305-4709.

Any response to this action should be mailed to:

Art Unit: 2674

Commissioner of Patents and Trademarks

Washington, DC. 20231

Or faxed to: 703-872-9306 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, sixth-floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is 703-306-0377.
